Mehr Sicherheit mit »XTech«

XTech ist ein mehrstufiges Sicherheitssystem unserer Powerbanks mit Schnellladefunktion. Dieses garantiert die Sicherheit beim Laden des Smartphones, des Tablets und am Wichtigsten: Des Anwenders. XTech ist mehr als die Auswahl einer guten Batteriezelle. Es bedeutet auch die Entwicklung und den Einsatz einer Überwachungselektronik für verschiedene Parameter in der Powerbank, sowie ausgewählte Test - und Qualitätssicherungsverfahren während der Produktion.

Kontinuierliche Prüfungen und stetige Optimierungen unserer Produkte stehen dabei im absoluten Fokus. Daher haben wir unsere XTech-Philosophie ins Leben gerufen, die für schnelles, effizientes und sicheres Aufladen steht. Dabei legen wir aktuellste Sicherheitsstandards zu Grunde und runden diese durch unsere «Quality tested in Germany» Kontrollen ab.

XTech is a multi-level safety system in our rapid charging powerbanks. It is designed to ensure added security for you as a user when charging smartphones, tablets and other electronic devices. XTech is more than selecting good components. It includes the development and the use of monitoring systems for the individual components, as well as testing and quality assurance procedures during production.

Our product range is geared to the needs of the mobile user and includes latest trends and cutting edge technology. Continuous testing and optimization is our #1 focus. XTechs`s philosophy is a world with fast, efficient, and safe recharging, which we ensure through compliance with latest security standards delivered by our «Quality tested in Germany» controls

XTECH

Input Over-Current Protection
Protects the powerbank from unexpected current surges from the connected adapter.

Input Over-Voltage Protection
Protects the powerbank from unexpected voltage surges from the connected adapter.

Output Over-Current Protection
Protects the connected device if errors causing current surges occur.

Output Over-Voltage Protection
Protects the connected device if errors causing voltage surges occur.

Battery Over-Heat Protection
Stops charging if battery temperature is too high.

Output Over-Discharge Protection
Cuts off discharging if Battery voltage is too low.

Input Short-Circuit Protection
Protects powerbank if input short circuits are detected.

Static Electricity Protection
Protection against ±8KV static in air and ±4KV contact static.

External Battery Protection
Additional Hardware protection IC in addition to the main control IC.

Reset Protection
Featuring a Power On/Off button to restart the powerbank in case of errors.
